Conference 08 from Phase A.

CONF. 08

EVOLUTION, INVOLUTION AND REVOLUTION

First we must understand that the Law of Evolution is completely mechanical. The second thing we must observe is that if the Law of Evolution exists, the law of involution also exists, since it is its twin sister by opposition. The mechanical hope of humanity in evolution is a failure. If we look at everything we have "evolved" in recent years we will realize this. When had we seen so much degeneration, perversity, wars, prostitution, homosexualism, lesbianism, cruelty, etc., etc.?

We must stop dreaming of a mechanical evolution and realize that only through the Conscious Revolution is human regeneration possible. To understand the error we are in when we lean on concepts such as Darwin's theory.

The objective of this conference is that we manage to see clearly what we come to the planet for and how we can achieve the objective.

How do we evolve through the four kingdoms of nature? All the sparks come out of the Sacred Absolute Sun in search of their Mastery or Self-realization, through one of the Seven Rays of Creation. And they descend to the Wheel of Samsara to take the course. A few manage to self-realize, the majority fail. All have free will and are not pressured to achieve triumph.

300,000 esoteric years are set as the time for the opportunity, represented in the formation of three thousand (3,000) souls, 1 soul for each cycle; and one hundred and eight (108) human existences for each one of the souls. Which is equivalent to three hundred twenty-four thousand (324,000) human physical bodies.

There are three alternatives on the wheel:

Triumph (achieving Self-realization).
Failure (exhausting the existences and returning to the absolute with the 3%).
Renouncing the Wheel and returning with 3% of Consciousness.

Let us look at the Wheel of Samsara:

On the right Evolution ascends, directed by Anubis. On the left Involution descends, directed by Typhon.

In Evolution we find the four kingdoms of nature, and in Involution the same four kingdoms in an involutive state:

- Mineral Kingdom. - Mineraloid Kingdom.
- Plant Kingdom. - Plantoid Kingdom.
- Animal Kingdom. - Animaloid Kingdom.
- Human Kingdom. - Humanoid Kingdom.

Let us study Evolution:

In the Mineral Kingdom the spark is connected to a mineral physical body (stone, metal, grain of sand, etc.)

Its soul is called Gnome or Pygmy and it has the original spark with its 3% of Consciousness. It has no psychological defects, but begins their creation. It is assigned the first brain, which is the emotional one.

In these conditions it will last thousands and even millions of years forming its first defects. The first defects it forms are those of disobedience to the Guru Devas of nature. It continues with those of antipathy, etc., etc.

The only duty that the spark has in the Mineral kingdom is to attend the school where it is being taught the different things of the kingdom.

When Anubis sees that the spark already has enough defects created he transfers it to the Plant kingdom.

In the Plant Kingdom the spark is connected to a plant, according to the original Ray to which it belongs. Its soul is called Elemental. And its Consciousness continues with the 3% just as it arrived, but it is transferred with the defects it created.

It is assigned the second brain, which is the Motor-Instinctive-Sexual one.

Although it is planted in one place, it begins the development of the instinctive brain. This brain allows it to feel pain, pleasure and fear.

It thus remains as a bi-brained being. Emotional Brain and Motor-Instinctive-Sexual brain. It has to begin to struggle for its food, for light, and against parasitic plants etc. In that struggle it creates new psychological defects, since it already feels pain and has to apprehend a great deal from nature, in order to become strong.

When the Guru Deva sees that enough defects have been created he disconnects it from the Plant kingdom and connects it to the Animal kingdom.

In the Animal Kingdom the spark keeps its 3% of Consciousness, keeps the two brains of the Plant kingdom, with the difference that it is not planted and can move, look for its own food, learn to defend itself from other animals, etc., etc.

Here it will develop all its animal instincts, fornication, violence, fear, agility, it learns to subsist in a harsh environment, a fact that leads it to create new defects.

The soul in the Animal kingdom is called Anima.

When the Guru Deva sees that it has enough defects he will transfer it to the Human Kingdom.

In the Human Kingdom they will give it a new brain, which is the Intellectual one, and it will receive the name of Soul. It is assigned 108 existences with a human physical body. They will connect the silver cord to the first human physical body.

From this moment on it will descend nine steps, or rather it will degenerate in cycles of twelve (12) existences until it has descended the nine (9) steps.

The first existences will take place in a tribe in a place far away from civilization. On completing existence number 54 Evolution will have ended. And the human, because of so much Ego that has been formed, will begin Involution, even though it still has the right to another 54 existences as a Humanoid. Instinct puts the intellect at its service, and the Soul or Psyche blackens in a much more accelerated way.

If we do not take advantage of the Soul we lose it, because once the 108 existences are exhausted we will enter Involution, until nature disintegrates the last of the psychological aggregates and we achieve the Second Death.

Let us study Involution:

Once the 108 existences in the Human Kingdom have been exhausted, the spark is connected to an involutive animal, while its contaminated essence penetrates into the Nine Dantesque Circles, from where it will not come out until nature finishes disintegrating all the defects.

Here it will receive numerous animal bodies, and later it will be connected to numerous bodies of involutive plants, and finally it will reach the Involutive Mineral Kingdom (minerals in decomposition).

These steps must take place since the Sun cannot have idle sparks. All must serve the Law of the Trogo.

WHAT IS THE REVOLUTION?

The Revolution of the Consciousness is a work that each one of us must do in order to achieve one's own change.

This change is made through the Three Factors of the Revolution of the Consciousness:

- Psychological Death.
- Spiritual Birth.
- Sacrifice for Humanity.

Psychological Death:

- To discover the psychological defects through Self-observation.
- To judge the defects until understanding them.
- To beg the Divine Mother to eliminate the understood defects.

With psychological death the Consciousness trapped in the defects is liberated.

Spiritual birth:

The wise use of the Sexual Creative Energy to create the Existential Bodies of the Being. Sexual union of man and woman (phallus in the yoni) without spilling the Sexual Creative Energy.

With Spiritual Birth the liberated Consciousness is fixed to the spinal cord.

Sacrifice for humanity:

To give the knowledge to humanity, disinterestedly, so that each person who receives it can do their own Work.

With sacrifice for humanity Love is awakened.

In this way we liberate ourselves from the Wheel of Samsara, from the processes of Evolution and Involution to which we have been tied for a very long time. Thus we achieve the Self-Realization of our Being.

End of Conference 08.
